

This Is The History Of Module 2!

2018/05/23

This was for the dream case!

```
1 cd faillog
2 nano thedreamcase.md
3 git status
4 git add -A
5 git commit
6 git push -u origin master
7 history
8 cd master (I forgot how to do things...this is when I open
ed module 1 back up)
9 ls
```

This is when I started the Wget tutorial

```
10 cd
11 mkdir wget-activehistory
12 cd cd wget-activehistory (didn't understand what I did wr
ong, made GOOD choice of getting coffee. learned why not to u
se copy paste all of the time)
13 cd wget-activehistory
14 cd (got confused by instructions... Did I need to be in t
he directory?? duh)
```

```
15 cd wget-activehistory
16 wget http://activehistory.ca/papers/
17 wget -r --no-parent -w 2 --limit-rate=20k http://activehi
story.ca/papers/ (this took 20 mins...I seriously thought I
f*ed up)
18 history
```

Saved the history in a nano file, checked to make sure everything was there, commit, and push, but nadda on git...so thats cool.
